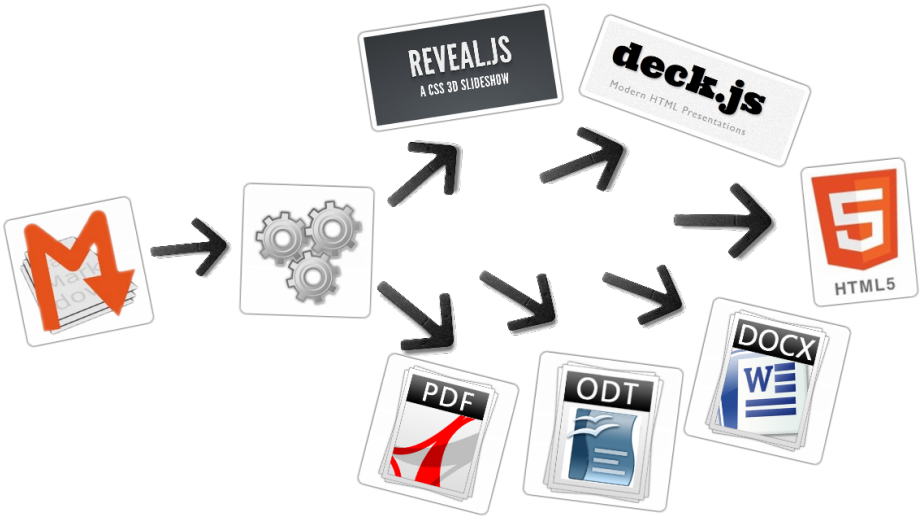
Chapter 1

About

1.1 What is it?

MarkdownSlides is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.



1.2 Samples

From a MARKDOWN file generate:

- reveal-slides

- reveal-slides-alternative
- reveal-pdf-slides
- reveal-pdf-slides-alternative
- deck-slides
- deck-slides-alternative
- pdf-beamer
- pdf
- html
- docx
- odt

1.3 Licence

This work is licensed under a:

- Creative Commons Attribution 3.0

The program source code are licensed under a:

- GPL 3.0

Chapter 2

Instalation and how to use

2.1 Dependencies

Pandoc (needs to be installed)

Phantom.js (needs to be installed)

Reveal.js (automaticaly downloaded)

Deck.js (automaticaly downloaded)

Now, only works in Linux (may be on MacOS)

2.2 Download

https://github.com/asanzdiego/markdownslides/archive/master.zip

2.3 Creation

First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.

Create the md files that you want to generate in the **md folder**. The md files are Markdown files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

Once created the md files, **we can generate with an script**.

- reveal-slides

- reveal-pdf-slides
- deck-slides
- pdf-beamer
- pdf
- html
- docx
- odt

2.4 Build

In the root folder you have to execute: ~ ./build.sh [mode] [folder] ~

Where [**mode**] can take the next values:

- "**min**": generate deck-slides and plain html.
- "**med**": generate also reveal-slides, docx and odt (**default value**)
- "**max**": generate all formats.

And where [**folder**] is the name of the folder wher to find the md files. If no folder name, it will convert all md files of all the folders.

Chapter 3

Author

3.1 Adolfo Sanz De Diego

3.1.1 My Resume

Old JEE web developer

Today:

- **Computer teacher**:
  - Hardware, Operating Systems
  - Networking, Programming
- **Freelance Trainer**:
  - Java, Android
  - JavaScript, jQuery
  - JSF, Spring, Hibernate
  - Groovy & Grails
- **I like to develop**

3.1.2 Hackalover

For hackathons lovers

- **Meetup**: http://www.meetup.com/Hackathon-Lovers/
- **Twitter**: http://twitter.com/HackathonLovers
