**1 ABOUT**

## 1.1 WHAT IS IT? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

## 1.2 WHAT IS IT? (II)

# 1.3 SAMPLES

- From a **MARKDOWN** file generate:
  - deck-slides
  - deck-slides-alternative
  - reveal-slides
  - reveal-slides-alternative
  - reveal-pdf-slides
  - reveal-pdf-slides-alternative
  - html
  - docx
  - odt

# 1.4 LICENCE

# **2 INSTALATION AND HOW TO USE**

## 2.1 DEPENDENCIES

- **Pandoc** (needs to be installed)
- **Phantom.js** (needs to be installed)
- **Reveal.js** (automatically downloaded)
- **Deck.js** (automatically downloaded)
- Now, only works in Linux (may be on MacOS)

## 2.2 DOWNLOAD

- <https://github.com/asanzdiego/markdownslides/archiv>

## **2.3 CREATION (I)**

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

## 2.4 CREATION (II)

- Once created the md files, **we can generate with an script.**

- reveal-slides
- reveal-pdf-slides
- deck-slides
- pdf-beamer
- pdf
- html
- docx
- odt

## 2.5 BUILD

- In the root folder you have to execute:

```
./build.sh [mode] [folder]
```

- Where [**mode**] can take the next values:
  - "**min**": generate deck-slides and plain html.
  - "**med**": generate also reveal-slides, docx and odt (**default value**)
  - "**max**": generate all formats.
- And where [**folder**] is the name of the folder where to find the md files. If no folder name, it will convert all md files of all the folders.
