

Markdown Slides

Adolfo Sanz De Diego

January 2014

I

About

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

What is it? (II)

- From a MARKDOWN file generate:
 - reveal-slides
 - reveal-slides-alternative
 - reveal-pdf-slides
 - reveal-pdf-slides-alternative
 - deck-slides
 - deck-slides-alternative
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

- **This work is licensed under a:**
 - Creative Commons Attribution 3.0
- **The program source code are licensed under a:**
 - GPL 3.0

II

Instalation and how to use

- Pandoc (needs to be installed)
- Phantom.js (needs to be installed)
- Reveal.js (automatically downloaded)
- Deck.js (automatically downloaded)
- Now, only works in Linux (may be on MacOS)

- `https://github.com/asanzdiego/markdownslides/archive/master.zip`

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are Markdown files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

- Once created the md files, **we can generate with an script.**
 - reveal-slides
 - reveal-pdf-slides
 - deck-slides
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

- To **convert all md files of all the folders** go to the root folder and execute:

```
./build.sh
```

- To **convert all md files of one folder** go to the root folder and execute:

```
./build.sh [folder_name]
```
