

MARKDOWN SLIDES

ADOLFO SANZ DE DIEGO

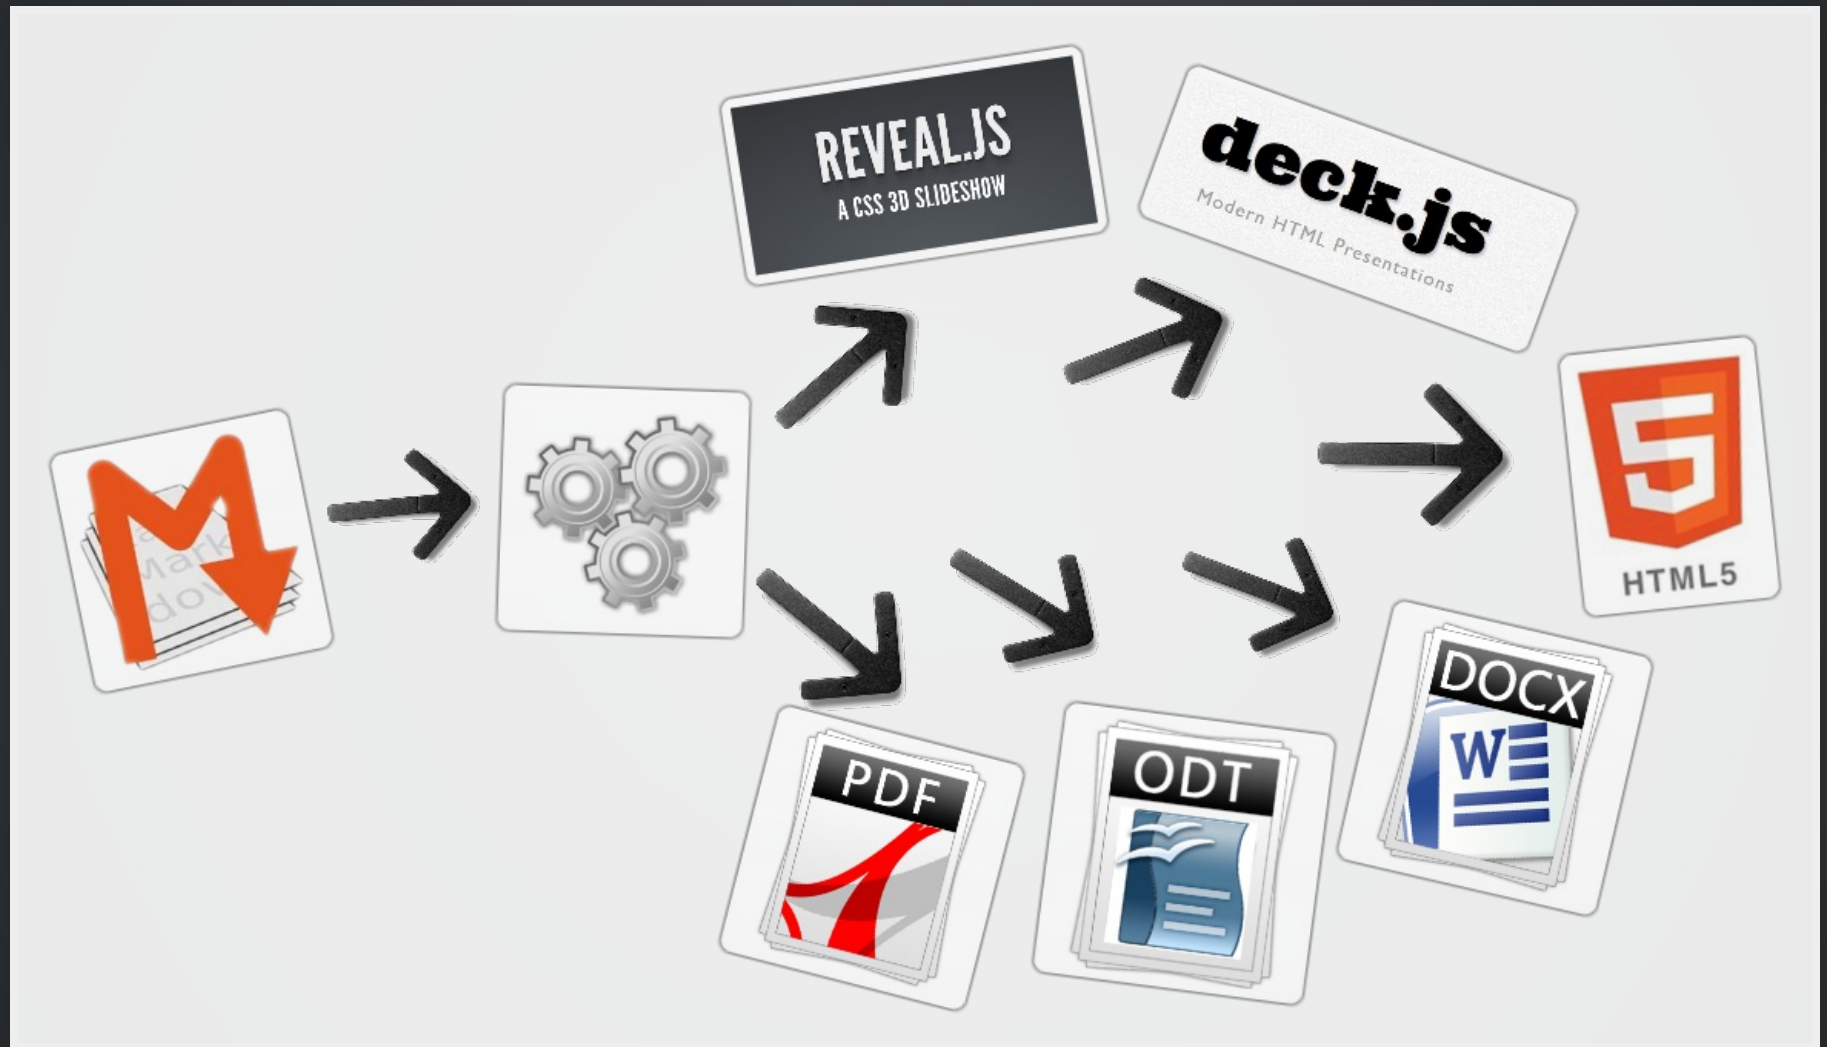

JANUARY 2014

1 ABOUT

1.1 WHAT IS IT? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

1.2 WHAT IS IT? (II)

1.3 SAMPLES

- From a **MARKDOWN** file generate:
 - reveal-slides
 - reveal-slides-alternative
 - reveal-pdf-slides
 - reveal-pdf-slides-alternative
 - deck-slides
 - deck-slides-alternative
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

1.4 LICENCE

- This work is licensed under a:
 - Creative Commons Attribution 3.0
- The program source code are licensed under a:
 - GPL 3.0

2 INSTALATION AND HOW TO USE

2.1 DEPENDENCIES

- [Pandoc](#) (needs to be installed)
- [Phantom.js](#) (needs to be installed)
- [Reveal.js](#) (automatically downloaded)
- [Deck.js](#) (automatically downloaded)

2.2 CREATION (I)

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

2.3 CREATION (II)

- Once created the md files, **we can generate with an script.**
 - reveal-slides
 - reveal-pdf-slides
 - deck-slides
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

2.4 BUILD

- To **convert all md files of all the folders** go to the root folder and execute:

```
./build.sh
```

- To **convert all md files of one folder** go to the root folder and execute:

```
./build.sh [folder_name]
```
