

MARKDOWN SLIDES

[EN]

ADOLFO SANZ DE DIEGO

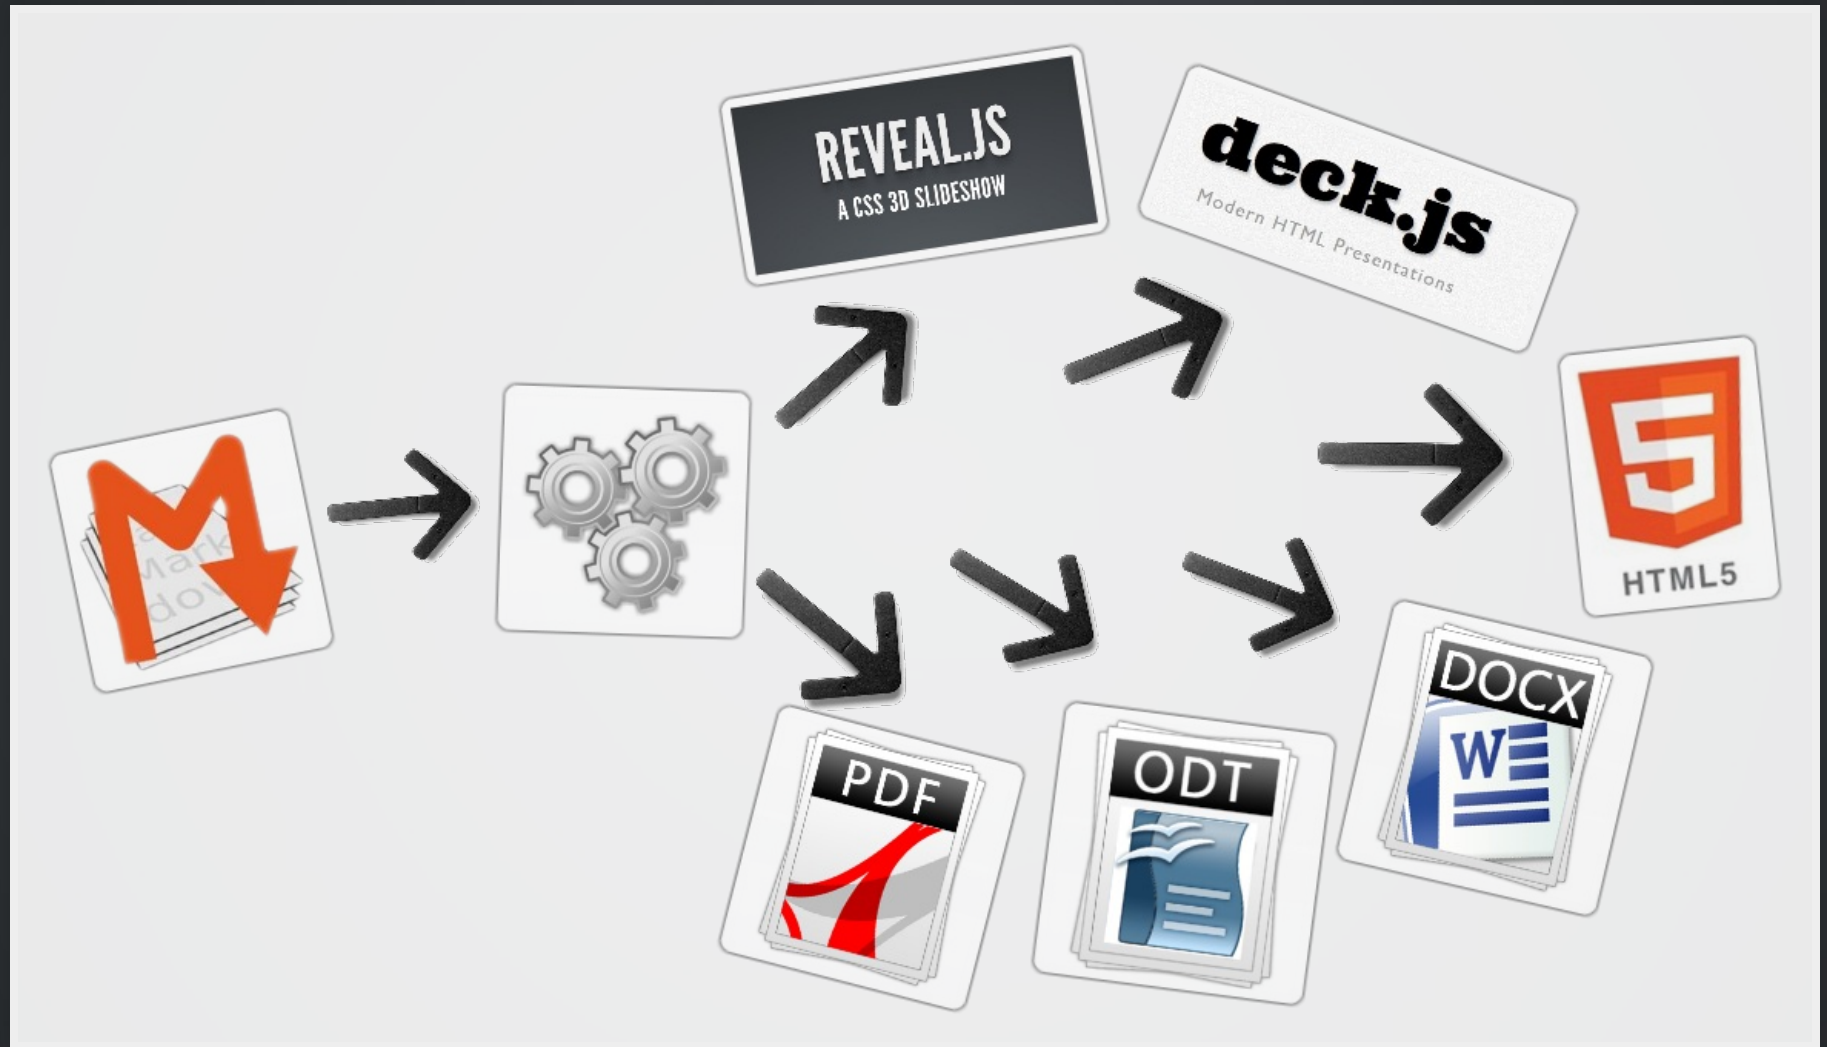

JANUARY 2014

1 ABOUT

1.1 WHAT IS IT? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

1.2 WHAT IS IT? (II)

1.3 SAMPLES

- From a **MARKDOWN** file generate:
 - **deck-slides**
 - **deck-slides-alternative**
 - **reveal-slides**
 - **reveal-slides-alternative**
 - **reveal-pdf-slides**
 - **reveal-pdf-slides-alternative**
 - **pdf-beamer**
 - **pdf**
 - **html**
 - **docx**
 - **odt**

1.4 LICENCE

- This work is licensed under a:
 - Creative Commons Attribution 3.0
- The program source code are licensed under a:
 - GPL 3.0

2 INSTALATION AND HOW TO USE

2.1 DEPENDENCIES

- [Pandoc](#) (needs to be installed)
- [Phantom.js](#) (needs to be installed)
- [Reveal.js](#) (automatically downloaded)
- [Deck.js](#) (automatically downloaded)
- Now, only works in Linux (may be on MacOS)

2.2 DOWNLOAD

- <https://github.com/asanzdiego/markdownslides/archive/>

2.3 CREATION (I)

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

2.4 CREATION (II)

- Once created the md files, **we can generate with an script.**
 - reveal-slides
 - reveal-pdf-slides
 - deck-slides
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

2.5 BUILD

- In the root folder you have to execute:

```
./build.sh [mode] [folder]
```

- Where [**mode**] can take the next values:
 - "**min**": generate deck-slides and plain html.
 - "**med**": generate also reveal-slides, docx and odt (**default value**)
 - "**max**": generate all formats.
- And where [**folder**] is the name of the folder where to find the md files. If no folder name, it will convert all md files of all the folders.

3 AUTHOR

3.1 ADOLFO SANZ DE DIEGO

- **Old JEE web developer**
- Today:
 - **Computer teacher:**
 - Hardware, Operating Systems
 - Networking, Programming
 - **Freelance Trainer:**
 - Java, Android
 - JavaScript, jQuery
 - JSF, Spring, Hibernate
 - Groovy & Grails
 - **I like to develop**

3.2 HACKALOVER

- **For hackathons lovers**
 - **Meetup:** <http://www.meetup.com/Hackathon-Lovers/>
 - **Twitter:** <http://twitter.com/HackathonLovers>
 - **Blog:** <http://hackathonlovers.tumblr.com/>
 - **LinkedIn:**
<http://www.linkedin.com/groups/Hackathon-Lovers-6510465>
 - **YouTube:**
<http://www.youtube.com/channel/UCRwSe7jK-y62BMvliNBV1qw>

3.3 TWEETS SENTIMENT

- Is a **tweets analyzer** which extracts semantic information to know if the general tweets feeling about a topic is positive or negative.
 - **Web:** <http://tweetssentiment.com/>
 - **Twitter:** <http://twitter.com/TweetsSentiment>
