

Markdown Slides

Adolfo Sanz De Diego

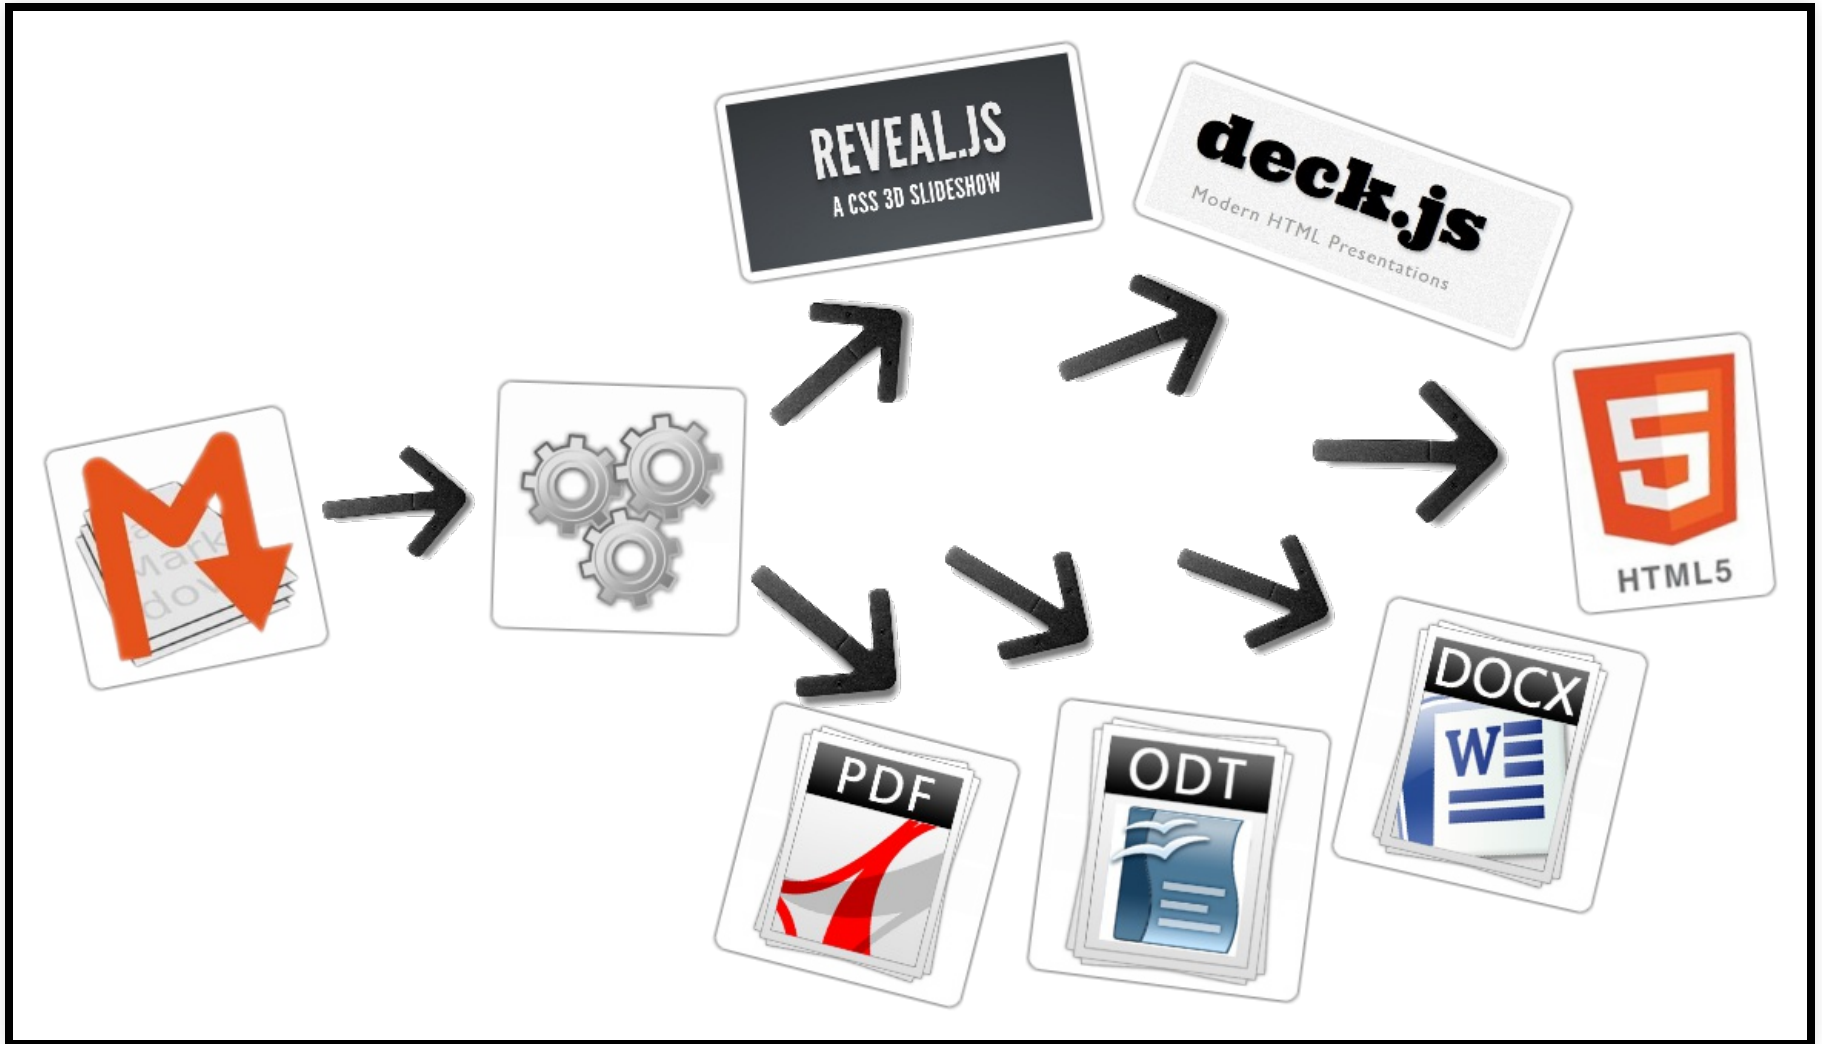

January 2014

1 About

1.1 What is it? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

1.2 What is it? (II)

1.3 Samples

- From a **MARKDOWN** file generate:
 - reveal-slides
 - reveal-slides-alternative
 - reveal-pdf-slides
 - reveal-pdf-slides-alternative
 - deck-slides
 - deck-slides-alternative
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

1.4 Licence

- **This work is licensed under a:**
 - Creative Commons Attribution 3.0
- **The program source code are licensed under a:**
 - GPL 3.0

2 Instalation and how to use

2.1 Dependencies

- [Pandoc](#) (needs to be installed)
- [Phantom.js](#) (needs to be installed)
- [Reveal.js](#) (automatically downloaded)
- [Deck.js](#) (automatically downloaded)
- Now, only works in Linux (may be on MacOS)

2.2 Download

- <https://github.com/asanzdiego/markdownslides/archive/>

2.3 Creation (I)

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

2.4 Creation (II)

- Once created the md files, **we can generate with an script.**
 - reveal-slides
 - reveal-pdf-slides
 - deck-slides
 - pdf-beamer
 - pdf
 - html
 - docx
 - odt

2.5 Build

- In the root folder you have to execute: `~ ./build.sh`
`[mode] [folder] ~`
- Where **[mode]** can take the next values:
 - **"min"**: generate deck-slides and plain html.
 - **"med"**: generate also reveal-slides, docx and odt
(**default value**)
 - **"max"**: generate all formats.
- And where **[folder]** is the name of the folder wher to find the md files. If no folder name, it will convert all md files of all the folders.

3 Author

3.1 Adolfo Sanz De Diego

3.2 My Resume

- **Old JEE web developer**
- Today:
 - **Computer teacher:**
 - Hardware, Operating Systems
 - Networking, Programming
 - **Freelance Trainer:**
 - Java, Android
 - JavaScript, jQuery
 - JSF, Spring, Hibernate
 - Groovy & Grails
 - **I like to develop**

3.3 Hackalover

- **For hackathons lovers**
 - **Meetup:** <http://www.meetup.com/Hackathon-Lovers/>
 - **Twitter:** <http://twitter.com/HackathonLovers>
 - **Blog:** <http://hackathonlovers.tumblr.com/>
 - **LinkedIn:**
<http://www.linkedin.com/groups/Hackathon-Lovers-6510465>
 - **YouTube:**
<http://www.youtube.com/channel/UCRwSe7jK-y62BMvliNBV1qw>

3.4 Tweets Sentiment

- Is a **tweets analyzer** which extracts semantic information to know if the general tweets feeling about a topic is positive or negative.
 - **Web:** <http://tweetssentiment.com/>
 - **Twitter:** <http://twitter.com/TweetsSentiment>

3.5 Where to find me?

- My nick: **asanzdiego**
