# Chapter 1

## About

### 1.1 What is it?

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF slides generator **from** **MARKDOWN** files, that also generate HTML, ODT and DOCX documents.

### 1.2 Samples

- From a [MARKDOWN](#) file generate:

- [reveal-slides](#)
- [reveal-slides-alternative](#)
- [reveal-pdf-slides](#)
- [reveal-pdf-slides-alternative](#)
- [deck-slides](#)
- [deck-slides-alternative](#)
- [pdf-beamer](#)
- [pdf](#)
- [html](#)
- [docx](#)
- [odt](#)

### 1.3 Licence

- This work is licensed under a:
  - [Creative Commons Attribution 3.0](#)
- The program source code are licensed under a:
  - [GPL 3.0](#)

## Chapter 2

# Instalation and how to use

### 2.1 Dependencies

- [Pandoc](#) (needs to be installed)
- [Phantom.js](#) (needs to be installed)
- [Reveal.js](#) (automaticaly downloaded)
- [Deck.js](#) (automaticaly downloaded)
- Now, only works in Linux (may be on MacOS)

### 2.2 Download

- <https://github.com/asanzdiego/markdownslides/archive/master.zip>

### 2.3 Creation

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are [Markdown](#) files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).
- Once created the md files, **we can generate with an script**.
  - reveal-slides
  - reveal-pdf-slides

- deck-slides
- pdf-beamer
- pdf
- html
- docx
- odt

## 2.4 Build

- In the root folder you have to execute:

```
./build.sh [mode] [folder]
```

- Where **[mode]** can take the next values:
  - “**min**”: generate deck-slides and plain html.
  - “**med**”: generate also reveal-slides, docx and odt (**default value**)
  - “**max**”: generate all formats.
- And where **[folder]** is the name of the folder wher to find the md files. If no folder name, it will convert all md files of all the folders.

# Chapter 3

## Author

### 3.1 Adolfo Sanz De Diego

#### 3.1.1 My Resume

- Old JEE web developer
- Today:
  - **Computer teacher:**
    - \* Hardware, Operating Systems
    - \* Networking, Programming
  - **Freelance Trainer:**
    - \* Java, Android
    - \* JavaScript, jQuery
    - \* JSF, Spring, Hibernate
    - \* Groovy & Grails
  - I like to develop

#### 3.1.2 Hackalover

- For hackathons lovers
  - **Meetup:** <http://www.meetup.com/Hackathon-Lovers/>
  - **Twitter:** <http://twitter.com/HackathonLovers>
  - **Blog:** <http://hackathonlovers.tumblr.com/>
  - **LinkedIn:** <http://www.linkedin.com/groups/Hackathon-Lovers-6510465>
  - **YouTube:** <http://www.youtube.com/channel/UCRwSe7jK-y62BMvLiNBV1qw>

### 3.1.3 Tweets Sentiment

- Is a **tweets analyzer** which extracts semantic information to know if the general tweets feeling about a topic is positive or negative.
  - Web: <http://tweetssentiment.com/>
  - Twitter: <http://twitter.com/TweetsSentiment>

### 3.1.4 Where to find me?

- My nick: **asanzdiego**
  - AboutMe: <http://about.me/asanzdiego>
  - GitHub: <http://github.com/asanzdiego>
  - Twitter: <http://twitter.com/asanzdiego>
  - Blog: <http://asanzdiego.blogspot.com.es>
  - LinkedIn: <http://www.linkedin.com/in/asanzdiego>
  - Google+: <http://plus.google.com/+AdolfoSanzDeDiego>
