

# **MARKDOWN SLIDES [EN]**

**ADOLFO SANZ DE DIEGO**

**JANUARY 2014**

**1 ABOUT**

# 1.1 WHAT IS IT? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF slides generator from **MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

# 1.2 WHAT IS IT? (II)

# 1.3 SAMPLES

- From a **MARKDOWN** file generate:
  - deck-slides
  - deck-slides-alternative
  - reveal-slides
  - reveal-slides-alternative
  - reveal-pdf-slides
  - reveal-pdf-slides-alternative
  - pdf-beamer
  - pdf
  - html
  - docx
  - odt

# 1.4 LICENCE

- This work is licensed under a:
  - Creative Commons Attribution 3.0
- The program source code are licensed under a:
  - GPL 3.0

# **2 INSTALATION AND HOW TO USE**

## 2.1 DEPENDENCIES

- **Pandoc** (needs to be installed)
- **Phantom.js** (needs to be installed)
- **Reveal.js** (automatically downloaded)
- **Deck.js** (automatically downloaded)
- Now, only works in Linux (may be on MacOS)

## 2.2 DOWNLOAD

- <https://github.com/asanzdiego/markdownslides/archiv>

## 2.3 CREATION (I)

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

## 2.4 CREATION (II)

- Once created the md files, **we can generate with an script.**
  - reveal-slides
  - reveal-pdf-slides
  - deck-slides
  - pdf-beamer
  - pdf
  - html
  - docx
  - odt

## 2.5 BUILD

- In the root folder you have to execute:

```
./build.sh [mode] [folder]
```

- Where **[mode]** can take the next values:
  - **"min"**: generate deck-slides and plain html.
  - **"med"**: generate also reveal-slides, docx and odt (**default value**)
  - **"max"**: generate all formats.
- And where **[folder]** is the name of the folder where to find the md files. If no folder name, it will convert all md files of all the folders.

**3 AUTHOR**

# **3.1 ADOLFO SANZ DE DIEGO**

- **Old JEE web developer**
- Today:
  - **Computer teacher:**
    - Hardware, Operating Systems
    - Networking, Programming
  - **Freelance Trainer:**
    - Java, Android
    - JavaScript, jQuery
    - JSF, Spring, Hibernate
    - Groovy & Grails
  - **I like to develop**

## 3.2 HACKALOVER

- **For hackathons lovers**

- **Meetup:** <http://www.meetup.com/Hackathon-Lovers/>
- **Twitter:** <http://twitter.com/HackathonLovers>
- **Blog:** <http://hackathonlovers.tumblr.com/>
- **LinkedIn:**  
<http://www.linkedin.com/groups/Hackathon-Lovers-6510465>
- **YouTube:**  
<http://www.youtube.com/channel/UCRwSe7jK-y62BMvliNBV1qw>

## 3.3 TWEETS SENTIMENT

- Is a **tweets analyzer** which extracts semantic information to know if the general tweets feeling about a topic is positive or negative.
  - **Web:** <http://tweetssentiment.com/>
  - **Twitter:** <http://twitter.com/TweetsSentiment>
