Chapter 1

About

1.1 What is it?

MarkdownSlides is a Reveal.js, Deck.js and PDF slides generator from MARKDOWN files, that also generate HTML, ODT and DOCX documents.

1.2 Samples

From a [MARKDOWN](#) file generate: - [reveal-slides](#) - [reveal-slides-alternative](#) - [reveal-pdf-slides](#) - [reveal-pdf-slides-alternative](#) - [deck-slides](#) - [deck-slides-alternative](#) - [pdf-beamer](#) - [pdf](#) - [html](#) - [docx](#) - [odt](#)

1.3 Licence

This work is licensed under a: - [Creative Commons Attribution 3.0](#)

The program source code are licensed under a: - [GPL 3.0](#)

Chapter 2

Instalation and how to use

2.1 Dependencies

[Pandoc](#) (needs to be installed)

[Phantom.js](#) (needs to be installed)

[Reveal.js](#) (automaticaly downloaded)

[Deck.js](#) (automaticaly downloaded)

Now, only works in Linux (may be on MacOS)

2.2 Download

<https://github.com/asanzdiego/markdownslides/archive/master.zip>

2.3 Creation

First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.

Create the md files that you want to generate in the **md folder**. The md files are [Markdown](#) files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

Once created the md files, **we can generate with an script**. - reveal-slides - reveal-pdf-slides - deck-slides - pdf-beamer - pdf - html - docx - odt

2.4 Build

In the root folder you have to execute: `~/build.sh [mode] [folder] ~`

Where `[mode]` can take the next values: - “**min**”: generate deck-slides and plain html. - “**med**”: generate also reveal-slides, docx and odt (**default value**) - “**max**”: generate all formats.

And where `[folder]` is the name of the folder wher to find the md files. If no folder name, it will convert all md files of all the folders.

Chapter 3

Author

3.1 Adolfo Sanz De Diego

3.1.1 My Resume

Old JEE web developer

Today: - **Computer teacher**: - Hardware, Operating Systems - Networking, Programming - **Freelance Trainer**: - Java, Android - JavaScript, jQuery - JSF, Spring, Hibernate - Groovy & Grails - **I like to develop**

3.1.2 Hackalover

For hackathons lovers - **Meetup**: <http://www.meetup.com/Hackathon-Lovers/> - **Twitter**: <http://twitter.com/HackathonLovers> - **Blog**: <http://hackathonlovers.tumblr.com/> - **LinkedIn**: <http://www.linkedin.com/groups/Hackathon-Lovers-6510465> - **YouTube**: <http://www.youtube.com/channel/UCRwSe7jK-y62BMvliNBV1qw>

3.1.3 Tweets Sentiment

Is a **tweets analyzer** which extracts semantic information to know if the general tweets feeling about a topic is positive or negative. - **Web**: <http://tweetssentiment.com/> - **Twitter**: <http://twitter.com/TweetsSentiment>

3.1.4 Where to find me?

My nick: **asanzdiego** - AboutMe: <http://about.me/asanzdiego> - GitHub: <http://github.com/asanzdiego> - Twitter: <http://twitter.com/asanzdiego> - Blog:

<http://asanzdiego.blogspot.com.es> - LinkedIn: <http://www.linkedin.com/in/asanzdiego> - Google+: <http://plus.google.com/+AdolfoSanzDeDiego>
