# 1 About

# 1.1 What is it? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

## 1.2 What is it? (II)

# 1.3 Samples

- From a **MARKDOWN** file generate:
  - deck-slides
  - deck-slides-alternative
  - reveal-slides
  - reveal-slides-alternative
  - reveal-pdf-slides
  - reveal-pdf-slides-alternative
  - pdf-beamer
  - pdf
  - html
  - docx
  - odt

# 1.4 Licence

- **This work is licensed under a:**
  - Creative Commons Attribution 3.0
- **The program source code are licensed under a:**
  - GPL 3.0

# 2 Instalation and how to use

# 2.1 Dependencies

- [Pandoc](#) (needs to be installed)
- [Phantom.js](#) (needs to be installed)
- [Reveal.js](#) (automatically downloaded)
- [Deck.js](#) (automatically downloaded)
- Now, only works in Linux (may be on MacOS)

## 2.2 Download

- <https://github.com/asanzdiego/markdownslides/archive/>

## 2.3 Creation (I)

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate in the **md folder**. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

## 2.4 Creation (II)

- Once created the md files, **we can generate with an script.**
  - reveal-slides
  - reveal-pdf-slides
  - deck-slides
  - pdf-beamer
  - pdf
  - html
  - docx
  - odt

# 2.5 Build

- In the root folder you have to execute:

```
./build.sh [mode] [folder]
```

- Where [**mode**] can take the next values:
  - "**min**": generate deck-slides and plain html.
  - "**med**": generate also reveal-slides, docx and odt (**default value**)
  - "**max**": generate all formats.
- And where [**folder**] is the name of the folder where to find the md files. If no folder name, it will convert all md files of all the folders.

# 3 Author

# 3.1 Adolfo Sanz De Diego

- **Old JEE web developer**
- Today:
  - **Computer teacher:**
    - Hardware, Operating Systems
    - Networking, Programming
  - **Freelance Trainer:**
    - Java, Android
    - JavaScript, jQuery
    - JSF, Spring, Hibernate
    - Groovy & Grails
  - **I like to develop**

## 3.2 Hackalover

- **For hackathons lovers**
  - **Meetup:** <http://www.meetup.com/Hackathon-Lovers/>
  - **Twitter:** <http://twitter.com/HackathonLovers>
  - **Blog:** <http://hackathonlovers.tumblr.com/>
  - **LinkedIn:**  
<http://www.linkedin.com/groups/Hackathon-Lovers-6510465>
  - **YouTube:**  
<http://www.youtube.com/channel/UCRwSe7jK-y62BMvliNBV1qw>

## 3.3 Tweets Sentiment

- Is a **tweets analyzer** which extracts semantic information to know if the general tweets feeling about a topic is positive or negative.
  - **Web:** <http://tweetssentiment.com/>
  - **Twitter:** <http://twitter.com/TweetsSentiment>
