# MARKDOWN SLIDES

ADOLFO SANZ DE DIEGO

JANUARY 2014

1 ABOUT

1.1 WHAT IS IT? (I)

- **MarkdownSlides** is a Reveal.js, Deck.js and PDF **slides** generator **from MARKDOWN files**, that also generate HTML, ODT and DOCX documents.

1.2 WHAT IS IT? (II)

1.3 SAMPLES

- From a MARKDOWN file generate:
  - reveal-slides
  - reveal-slides-alternative
  - reveal-pdf-slides
  - reveal-pdf-slides-alternative
  - deck-slides
  - deck-slides-alternative
  - pdf-beamer
  - pdf
  - html
  - docx
  - odt

1.4 LICENCE

- **This work is licensed under a:**
  - Creative Commons Attribution 3.0
- **The program source code are licensed under a:**
  - GPL 3.0

2 INSTALATION AND HOW TO USE

2.1 DEPENDENCIES

- Pandoc (needs to be installed)
- Phantom.js (needs to be installed)
- Reveal.js (automaticaly downloaded)
- Deck.js (automaticaly downloaded)
- Now, only works in Linux (may be on MacOS)

2.2 DOWNLOAD

- https://github.com/asanzdiego/markdownslides/archive/

2.3 CREATION (I)

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.

- **Create the md files** that you want to generate in the **md folder**. The md files are Markdown files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).

2.4 CREATION (II)

- Once created the md files, **we can generate with an script**.
  - reveal-slides
  - reveal-pdf-slides
  - deck-slides
  - pdf-beamer
  - pdf
  - html
  - docx
  - odt

2.5 BUILD

- To **convert all md files of all the folders** go to the root folder and execute:

```
./build.sh
```

- To **convert all md files of one folder** go to the root folder and execute:

```
./build.sh [folder_name]
```
